**New Maintenance Tool Kit Boosts Productivity, Reduces Downtime**

Solutions from the Dupps Innovation Team  
Your partner in making renewal work

## The right tools for the job

Dupps designs and manufactures Pressor® high-pressure screw presses to provide peak efficiency and unmatched reliability and service life. Key to maintaining high performance is timely service — and thanks to the new Dupps Pressor Maintenance Tool Kit, customers can perform much of their own routine service better than ever before. The special tools in this new kit are specifically engineered to make each maintenance task much faster, as well as easier and safer for operators. That means that each Pressor service job can be done the right way, in safer conditions, and with far less system downtime.

### Cage Bolt Removal Tool

The new ergonomically designed Cage Bolt Removal Tool makes driving out cage bolts a simple, fast and safer operation. Securely attaching over the Dupps Pressor's strain rod, the Cage Bolt Removal Tool controls the operator's motion, precisely directing force to the bolt. It's a much more efficient way to remove cage bolts, and with far less stress on the operator.

### Bolt Head Locking Devices

Removing cage bolts is fast and easy with new Bolt Head Locking Devices. Welding a device to the hex end of each cage bolt prevents the bolt from rotating while removing hex nuts — a second operator no longer has to manually secure the bolt head.

### Cage Lifting Attachment

Using the Pressor's jib crane assembly to remove and refit heavy cages is easy with the new Cage Lifting Attachment. Locking securely to the cage, it provides a full range of motion for far greater control, balance and operator safety.

### Cage Storage Rack

The new Dupps Pressor Cage Storage Rack provides a stable, secure platform for handling cages during removal, service, shipping and storage. Cage Storage Racks are designed to be used in conjunction with the Cage Lifting Attachment.
